## SMALL CHANGE CAN MAKE A BIG IMPACT IN YOUR COMMUNITY

The holiday season is finally here. Some call it the most wonderful season of all. That's because we associate it with family traditions and gathering with friends and loved ones. It's a time of giving and spreading joy.

But giving back reminds me of the many good things we have right here in our community and why it's so important to spread the good as far as we can, especially to the most vulnerable in our local area.

I'm also reminded of how wonderful our communities are and what a big impact we can have when we work together to increase prosperity for everyone.

When you are an electric cooperative member, you help us spread the good throughout the year as your cooperative is involved in many programs designed to benefit not only co-op members but the public at-large.

**Billy Gibson**  
Dir. of Communications  
SDREA

One of those programs offered by most electric cooperatives across our state and across the country is called Operation Round Up (ORU). With ORU, members round up their bill to the next highest dollar amount, and the funds are donated to assist local families, individuals and other organizations in need.

When members round up their monthly bill from their cooperative and donate to this fund, they're making a big difference in someone's life. They are helping to meet an immediate, critical need, but just as importantly, they are telling this person the community cares about them and their well-being.

Over the years, our community-focused programs, food donations and other giving projects have built community projects, supported local schools and young people, fed hungry families, enabled families in need to keep the lights on and so much more - not just at Christmastime but throughout the calendar year.

You've likely heard me say that the cooperative principle "concern for community" is part of the cooperative network's DNA. It defines who we are as an organization. When we first brought electricity to rural South Dakota, the quality of life improved.

But other things also need to be addressed and through the years, our co-ops have been at the forefront of bringing improvements to the quality of life for our members. It's why we created the Operation Round Up program.

To date, with your help, we've given hundreds of thousands of dollars back to local families and individuals. And across the country, more than 350 electric co-ops have an ORU program, and together, we've raised millions for local communities. This shows that small donations from electric co-ops like ours, over time, can collectively make a big impact.

As a local cooperative, we have a stake in the community. We hope you will think of your co-op as more than your energy provider, but also as a catalyst for good.

**When we first brought electricity to rural South Dakota, the quality of life improved.**

# Deck your halls with home safety in mind

It's time to deck those halls - safely. More than 800 home fires are caused by holiday decorations each year, according to the National Fire Protection Association.

An additional 170 home fires are caused by Christmas trees each year. Keep these tips in mind for a safe holiday season:

- Carefully inspect all electrical decorations before you use them. Cracked or damaged sockets and loose or exposed wires can cause serious shock or start a fire.
- Make sure all extension cords and electrical decorations are being used properly - indoor-rated cords indoors, outdoor-rated cords for outside decorations.
- Inspect extension cords for damage and discard (not repair) any that are not completely intact.
- Never mount or support light strings in a way that might damage the cord's insulation.
- Outdoor electrical lights and decorations should be plugged into circuits protected by ground-fault circuit interrupters.
- Exercise caution when decorating near power lines. Keep yourself and your ladder at least 10 feet from power lines.
- Turn off all indoor and outdoor electrical decorations before leaving home or going to sleep.
- Avoid overloading electrical outlets with too many decorations or electrical devices. They can overheat and cause a fire.
- Never connect more than three strings of incandescent lights together.
- Water your Christmas tree daily.
- Keep all decorations at least 3 feet away from heating equipment.
- Avoid using candles. The flames are just too dangerous with all the flammable decorations around.
- Purchase electrical decorations from reputable retailers and that are approved by a nationally recognized testing lab such as UL, Intertek or CSA.

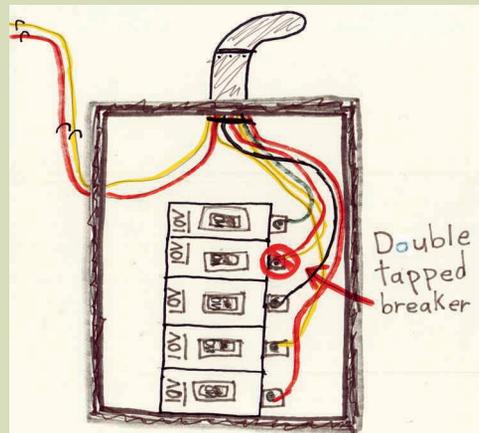

## A NEW TEACHING TOOL FOR SOLAR POWER EDUCATION

Rushmore Electric and Touchstone Energy have joined together to construct a demo trailer designed to teach co-op members across the state more about how solar power functions. The trailer is equipped with fold-out collection panels and also battery storage capability. Co-op energy experts use the trailer to frame discussions about net metering, interconnection agreements and more.

To see a video of the trailer and learn more about how electric cooperatives serve our members, visit Cooperative Connections Plus by scanning the QR code at right.

## Don't play on transformer boxes

### Olaf Sahlstrom

Olaf Sahlstrom, 9, shares a tip he learned from his parents, Ben and Naomi Sahlstrom: Double-tapped breakers are unsafe and can lead to overheating, arcing, and electrical fires. The Sahlstroms reside in Tracy, MN and are members of Lyon-Lincoln Electric Cooperative.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

# CHRISTMAS DESSERTS

## GINGERBREAD KISSED THUMBPRINT COOKIES

Ingredients:

3 c. flour  
2 tsps. ground ginger  
1 tsp. ground cinnamon  
1 tsp. baking soda  
1/4 tsp. ground nutmeg  
1/4 tsp. salt  
3/4 c. (1-1/2 sticks) butter,  
softened  
3/4 c. firmly packed brown sugar  
1/2 c. molasses  
1 egg  
1 tsp. pure vanilla extract  
1/4 c. granulated sugar  
60 milk chocolate kisses

**METHOD**

Mix flour, ginger, cinnamon, baking soda, nutmeg and salt in large bowl. Set aside. Beat butter and brown sugar in large bowl with electric mixer on medium until light and fluffy. Add molasses, egg and vanilla; mix well. Gradually beat in flour mixture on low speed until well mixed. Press dough into a thick flat disk. Wrap in plastic wrap. Refrigerate 4 hours or overnight. Preheat oven to 350°F. Shape dough into 1-inch balls. Roll in granulated sugar to coat. Place 2 inches apart on ungreased baking sheets. Bake 8-10 minutes or until edges of cookies begin to brown. Immediately press a chocolate candy into center of each cookie. Remove to wire racks; cool completely. Store cookies in airtight container up to 5 days.

[mccormick.com](http://mccormick.com)

Please send your favorite recipes to your local electric cooperative (address found on Page 3). Each recipe printed will be entered into a drawing for a prize in December 2022. All entries must include your name, mailing address, phone number and cooperative name.

## HOLIDAY HOT CHOCOLATE

Ingredients:

8 qt. box powdered milk  
1 lb. can Nestles Cocoa Mix  
7-8 oz. jar powdered creamer  
3 c. powdered sugar  
1/3 c. cocoa

**METHOD**

Mix in order given in large bowl. Put in air tight container. Use 1/4 cup mix per cup of hot water. Makes about 16-cup mix.

**Phyllis Niemann, Clear Lake**

## MOM'S CHRISTMAS DESSERT

Ingredients:

2-1/2 c. Rice Krispies  
1/2 c. light brown sugar  
1 c. slivered almonds or toasted nut meats  
1/2 c. butter, melted  
1/2 gal. vanilla ice cream  
1 can pie cherries  
1/2 tsp. almond flavoring

**METHOD**

Mix first four ingredients together. Spread half mixture in a 9x13 pan evenly. Cut and press vanilla ice cream on top and spread remaining mixture on top. Freeze. When ready to serve, stir pie filling and almond flavoring together and heat on stove top or microwave and use for topping individual pieces.

**Patty Sinning, Lennox**

## PEANUT BUTTER PIE

Ingredients:

1 heaping c. peanut butter  
1 8 oz. pkg. cream cheese (softened)  
1 8 oz. tub cool whip (thawed)  
1/2 c. milk  
2 c. powdered sugar graham cracker pie crust (prepared)  
Crushed Butterfingers or Reeses for garnish

**METHOD**

Thoroughly mix peanut butter and cream cheese. Add 1/2 cup milk and slowly add 2 cups powdered sugar. Mix well. Fold in cool whip. Put in a prepared graham cracker crust. Makes two 9" pies or one 10" pie with a little extra. Top with crushed candy. Place in freezer until frozen. Remove from freezer 10 minutes before serving.

**Elaine Rieck, Harrisburg**

# Q: How can I keep my home warm while saving on my electric bill this winter?

A: Winterizing is an important step to keep your home cozy and your bills low. These tried-and-true methods will ensure your home is sealed tight and ready for colder weather. I've also included tips that address common misconceptions.

### INSULATING PIPES AND WATER HEATER

You can raise the water temperature inside your home's water pipes by 2 to 4 degrees by insulating, according to the U.S. Department of Energy (DOE). Insulating allows you to turn down the heat on your water heater, saving energy and money.

Start by insulating the pipes coming out of your water heater. If you have a gas water heater, keep pipe insulation at least 6 inches away from the flue. Insulate hot and cold water lines. The latter can prevent condensation and freezing pipes. Insulating your water heater can save 7% to 16% on water-heating costs, DOE says. Insulation kits are available at hardware stores. Don't obstruct the pressure relief valve, thermostats or access valves.

### AIR SEALING

Air sealing and insulation are a great combination for minimizing home energy use. Insulation is like a warm sweater for your home, and air sealing is the wind breaker. All the cracks, gaps and holes in a home can be like having a window open year-round. Air sealing eliminates those leaks. It can be done as a do-it-yourself project or by a professional.

### WINDOW SEALING AND IMPROVEMENTS

Windows can be a source of drafts and wasted energy. Close windows tightly.

Add weatherstripping around windows to prevent warm air from escaping your home and caulk the gaps where the window trim meets the wall and the window frame. Add curtains to make the room feel warmer.

Storm windows are a lower-cost option for upgrading single-pane windows. They are available with low-emissivity coatings, which insulate better, and are available for installation either from the inside or outside of the window.

### FIREPLACE DAMPERS

When I was little, my dad told me it was too cold to have a fire. I remember thinking that made no sense, but he was right.

We had an open, wood-burning fireplace—not a wood stove. A fireplace can draw the warm air out of the house, cooling it down or causing your heating system to use more energy.

Your fireplace adds ambiance to your home but isn't necessarily effective at heating it. If you have a wood-burning fireplace, close the damper when your fire is extinguished. An open damper in the winter is an easy exit for the air you paid to heat.

Adding tempered glass doors to a wood-burning fireplace can create an extra buffer between the cold outside and a cozy living space.

Some gas fireplaces require a damper to remain permanently open so gas can vent out of the home. Check the specifications of your unit to ensure safe operation.

### BEST PRACTICES FOR CLOSING OFF PARTS OF A HOME

Through the years, I have heard a lot of debate about closing off rooms or parts of the home to save energy.

Best practices come down to the type of heat source. If you have a zonal heating system, where individual areas are controlled separately, you can close doors and only heat the areas you use. Examples of zonal systems are wall heaters, baseboard heat, hydronic radiant heat, radiators and ductless heat pumps, also called mini-splits.

Keep areas with plumbing or water lines warm enough so pipes do not freeze.

If you have a central forced-air heating system, leave doors open to all heated areas. Closing doors and/or register dampers forces the system to work harder, uses more energy and can shorten the life of heating equipment.

### CHECK YOUR FILTERS

Maintaining a clean filter in your furnace is one of the best ways to keep it running efficiently and prevent costly repairs. Check your furnace or ductless heat pump filter monthly during peak heating season.

# The Clauses share stories of Christmas seasons past

Billy Gibson

billy.gibson@sdrea.coop

If you want to be a big-time Santa, it's all about the beard.

These days, there's no place in the department store Santa scene for spurious scruff. Don't even try faking it. The kids can spot a fraud from halfway across the food court.

Sporting a convincing set of whiskers is how Curt Winquist scored a serious prime-time Santa gig more than 10 years ago.

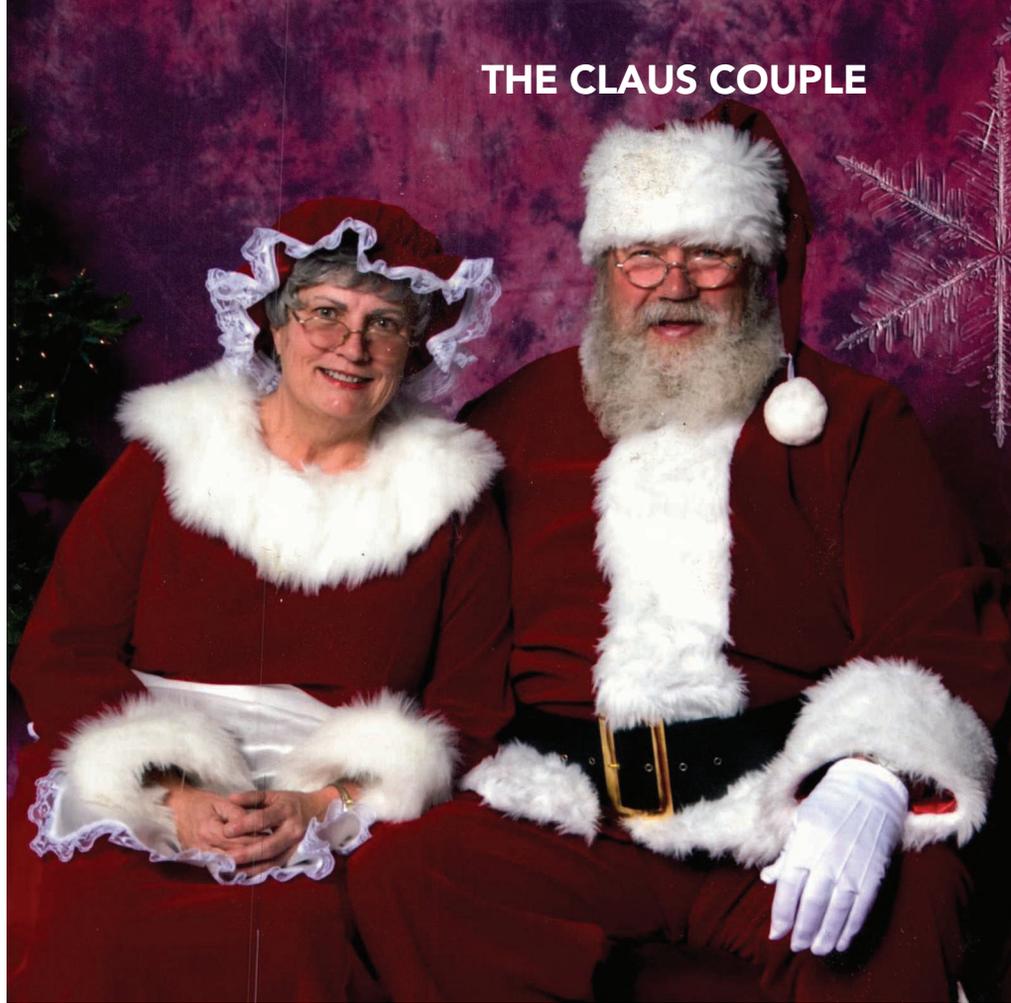

He always dressed up as Santa Claus each Christmas to entertain local kids using the same homemade suit that his dad donned before him. But as it often happens with middle aged men and their suits, this one started shrinking and getting appreciably tighter...especially around the mid-section.

So, Winquist found himself shopping for a new suit at a costume store in Sioux Falls when he was approached by a stranger who just so happened to be connected with a photography company. She took one look at the humble farmer from Alcester and told him he was about to join the top ranks as a "professional department store Santa."

"I told her I only knew how to farm and milk cows," Winquist recalled. "She put my name on the standby list and later I got a call. They said a Santa at a mall in Connecticut had a heart attack and died and they needed someone right away. I didn't even have time to get ready. It was on-the-job training."

He soon found himself being flown to the Brass Mill Center located in Waterbury, CT. For the next 38 days, he played Santa for upwards of 14,000 kids, some of whom only met with failure when they tried to yank off his beard.

Winquist, who is a member of Union

Carla and Curt Winquist of Alcester enjoy entertaining hundreds of children each holiday season.

County Electric while his son is a lineman at Southeastern Electric, spent the next six years traveling to Waterbury each Christmas season. The company he worked for put him up in the local Hilton and provided a security team each morning as he made his way to breakfast in the hotel restaurant and then off to the mall. It was strongly suggested that he not leave the hotel for any other reason lest he be spotted by mall patrons and his identity revealed.

Even his wife, Carla, got in on the act and served as Mrs. Claus for several seasons. The Connecticut gig ended in 2017, and these days the two are seen at smaller and more private venues such as day care centers, nursing homes, birthday parties and schools.

Along the way, the Winquists discovered that portraying Santa and Mrs. Claus doesn't always come with lots of laughter and bellies that shake like jelly.

Especially in December of 2012. That's the year, just three weeks before Christmas, that 26 people were shot and killed at Sandy Hook Elementary in Newtown, CT. The massacre occurred just 20 miles from the mall where Winquist worked each season.

Winquist found himself having to take the service elevator and exit through the back door to evade kids in the hotel lobby.

"There were families of the victims who were staying at the hotel and they were upset and crying and we didn't want the kids to see Santa walking through the lobby in that situation when they were heading out to funerals," he said. "It was just horrible because there was such grief, but then there were people who had no connection to the killings and they just wanted things to be normal. I had to switch my mind on and off. You just want to make the kids and the families feel better."

The Winquists have reams of stories to tell from the past as they continue their roles as the Claus couple from the North Pole. In fact, they've written a book about their experiences entitled "Santa's Christmas Diary," which is available on Amazon.

"It has been a big thrill for us. We work pretty well together as a team," Curt said. "She does a good job of calming kids down when they get nervous about sitting on Santa's lap, or if the lines get long and the kids start getting antsy. I love Mrs. Claus!"

LeRoy Iedema, Richard Ringling and Duane Strand crank out nearly 60,000 toy cars each year from their 12x10-foot workshop in Platte. Photo by Billy Gibson

## Duane Strand gets lots of 'smileage' out of making toy cars for children

**Billy Gibson**

editor@sdrea.coop

Frustrated moms across the ages have been searching for a surefire method for getting an unruly child to simmer down.

Duane Strand is pretty sure he's found a failsafe solution: toy cars.

Several years ago, Strand began building tiny wooden cars in his nondescript backyard shed in Platte. He recalls visiting Pierre one evening and having dinner at a local restaurant when a young boy suddenly started pitching a fit and hollering at the top of his lungs.

Strand just happened to have one of the cars in his pocket. He reached out and handed it to the child and was rather amazed at the result. Not only did the whining stop forthwith, but that boy's frown turned upside down as the

kid started beaming from ear to ear.

"He quit yelling right then and there. His whole attitude changed," Strand recalls. "These cars really have a soothing effect on the kids."

That's the impact Strand is shooting for as he and his three-man team of retirees crank out nearly 60,000 toy cars each year. They're looking to squeeze all the "smileage" they can get out of the toy cars they build.

The main construction crew includes retired farmer Richard Ringling and retired mechanic LeRoy Iedema. Ringling usually works the drill press to create holes in the wood where the axles will go. Then Iedema follows up by pressing the wheels onto the axles. He came up with a way to make sure the wheels roll straight and stay in place and dares anyone to try and pull off a wheel.

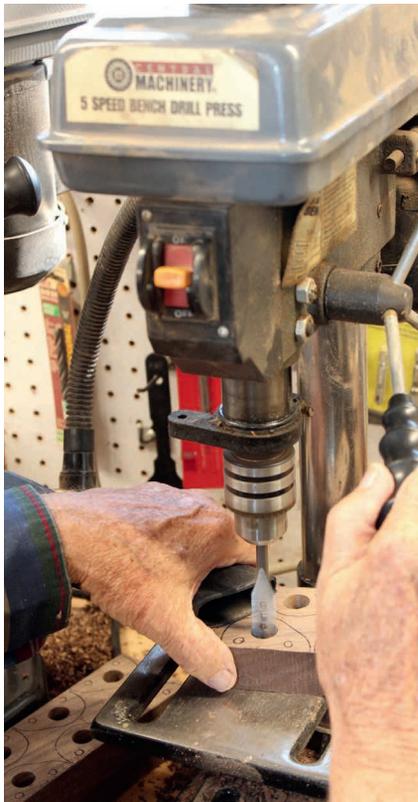

There are others who join in the

process: Justin Kok cuts the wood into manageable blocks; Brett Wynia performs repairs on the drill presses, band saws, sanders, routers and other pieces of equipment when they break down; and Curtis Versteeg helps to sand down the rough surfaces on the cars.

Toy cars are distributed by military personnel serving overseas.

And just down the road from the shop is the Platte Lumber Yard, where many of the material supplies are stored until needed for production. Strand said it was the folks down at the lumber yard who initiated the vital connection with

Dustin Knutson of Boyds Hardwood Gunstock supplies the toy makers with the laminated wood used to create the tiny cars (inset) for worldwide distribution. *Photo by Billy Gibson*

Boys Hardwood Gunstock that keeps the operation humming along.

“Without Boyds we wouldn’t be able to do any of this,” Strand said.

Dustin Knutson, a member of Central Electric Cooperative and part owner of the company that bills itself as the largest after-market gun stock maker in the world, is a Shriner with a heart for community service and said he was all-in when Strand approached him about supporting the program by supplying excess wood.

“They’re really easy to work with,” he said, noting that he keeps one of the cars on his desk. “They take whatever they can get and they show up consistently. We started saving off-cut blocks of wood specifically for the cars. The laminated wood works well because it’s colorful and looks good and the kids can pick out their favorite one.”

Strand’s distribution system is a bit scatter shot but he still manages to send them all over the globe. Anyone he knows who is planning a trip gets a supply of cars. Knutson, for instance, takes them with him when he travels for business or pleasure, whether vacationing in Mexico or hunting in Africa.

“People in America may think these are just simple toys, but I’ve been in parts of the world where a toy for a kid is a stick and a rock,” Knutson said. “But these little cars give kids something to smile about. Duane and his guys are just beautiful people doing good things for the good of humanity and we’re happy to help them any way we can.”

The toys also ride along in ambulances, military satchels and police vehicles in the event a child needs to be calmed. They show up in doctor’s offices, churches and other venues.

The operation is affiliated with a group called Toys for God’s Kids, a non-denominational organization based in Denver. Strand is the only affiliated “smile maker” in South Dakota.

While the three-man crew claims they’re working harder than they used to before retiring, Iedema assigns a greater value to his toil beyond the opportunity to put a smile on a kid’s face. He said his heart doctor has informed him that he’s in better shape than before he started woodworking three years ago. He’s slimmer, more active and feels a lot better.

Strand chips in, “...yeah, and he’s

more ornery than ever, too!”

Collectively, the guys crank out about 250 cars a day scrunched inside the 12 x 10-foot shed. Each unit has to be dipped in linseed oil to protect children from any potential toxicity. The toys are boxed and shipped to their destination at the recipient’s expense.

Strand doesn’t know how much longer he’s going to be able to keep cranking out cars. He’ll reach the age of 90 in a few months and his friend Ringling has a plan: “I told him when he turns 90 we’re going to take him up by the interstate and take a picture underneath the sign that says I-90. Get it?”

# Home appliances that use the most energy

**Tolu Omotoso**

Have you ever received your power bill and thought, “I wonder which appliances in my home are using the most energy?” Don’t worry - you’re not alone. A few years ago, after being away for a somewhat lengthy trip, I arrived home to a typical energy bill. I was surprised because I expected a lower bill after being away from home. This led me to a journey in search of answers.

My first answer came from browsing the Energy Information Administration’s (EIA) website, specifically the Residential Energy Consumption Survey. According to EIA, a typical U.S. home spends more than \$2,000 annually on energy bills, and on average, more than half of energy consumption is for just two end uses: space heating and air conditioning. Seeing this, I understood the importance of adjusting my thermostat while I’m away because it truly makes a difference.

I also learned that water heaters tend to be the third largest energy user at 13

percent, followed by lighting, which usually accounts for about 12.5 percent of the average energy bill.

Once I understood the factors driving my consumption, I was able to control them and save money by using helpful devices like smart thermostats, water heater controllers and smart power strips.

Several factors affect the amount of energy you use, including geographic location and climate, the number of people in the home, the type of home and its physical characteristics. The efficiency of energy-consuming devices and the amount of time they are used also impact home energy consumption.

To save energy and reduce your monthly bill, the following tips can help:

1. Use ENERGY STAR®-rated appliances and devices.
2. Replace old, inefficient equipment. For example, if your air conditioner, furnace or water heater is more than 10 years old, it is likely using a lot more energy than necessary. A newer model will save you money in the long run and

help you avoid a breakdown.

3. Use appliances with efficiency in mind. Only wash full loads of clothes or dishes, and when possible, cook with smaller, countertop appliances.

4. Set your thermostat accordingly to scale back heating or cooling when you are asleep or away. When you’re in the home and active, the Department of Energy recommends setting it to 78 degrees in the summer and 68 degrees in the winter. Aim for settings as close to those as possible to save energy.

5. Use energy efficient LED bulbs. They use 75 percent less energy than incandescents and last 25 times longer.

6. Plug electronics into a smart power strip, which allows you to designate “always on” for devices that need to maintain network connection, while cutting power from devices like speakers and TVs when they are not in use.

In addition to these steps, consider using real-time energy monitors to help identify faulty appliances or other problems like a broken water heater that runs unnoticed for extended periods of time, leading to high energy bills.

With a little extra attention, you’ll be well on your way to a path of energy savings - and lower energy bills.

Rooftop solar arrays offer an example of another major change in the electric industry.

#### Paul Wesslund

A variety of factors like extreme weather and increased use of renewable energy are affecting the electric utility industry so much that there's even a new way to talk about it: resilience.

You might be surprised to learn "resilience" isn't exactly used to describe the major changes affecting electricity service. It's about actionable steps utilities are taking to keep power flowing.

Just a few years ago, "reliability" was the term of choice. It meant trimming trees and keeping squirrels from chewing up electrical equipment. Attention to those priorities worked. The average American's electricity stayed on well over 99.9 percent of the time. That reliability record is still holding up, but it's under pressure on several emerging fronts.

More powerful and frequent natural disasters and even the growing fleets of electric vehicles call for utilities to learn new ways to do their job. These days, maintaining the grid means planning for sudden and large-scale disruptions.

If you're not sure what the difference is between "reliability" and "resilience,"

you're not alone. Even utilities can have slightly different definitions. But most agree resiliency is the ability to withstand and recover from disruptive events and to predict and adapt to ensure consumers have the power they need.

Here's another definition: Reliability is when you can take a punch. Resilience is how fast you get up off the canvas after you've been hit hard.

When destructive weather events occur, utilities need to be ready to get back up off the canvas quickly. And that's what they're doing, from burying more power lines underground to outage recovery plans that get the most essential services back online first. Last year, the White House signed a law that includes a \$10.5 billion Grid Resilience and Innovation Partnership Program.

Here are a few other ways electric utilities are building resilience:

**Coordinated Planning** - Cybersecurity is an example of government and utilities working together, sharing information to protect against the latest cyber threats. In other cases, one size does not fit all.

Electric cooperatives in particular point out that resilience means

paying attention to regional and local differences. Raising substations higher off the ground might make sense in flood-prone areas while wrapping utility poles with fire-resistant coverings could be considered where wildfires are a threat.

**Microgrids** - One idea is to create small areas that can supply their own electricity in the case of a widespread outage, using a combination of sources like wind and solar power, large-scale storage batteries and diesel generators.

**Continued Modernization** - Electric utilities are investing in power lines that connect to new sources of renewable energy. They're also investing in digital equipment and sensors that can more quickly detect and resolve power outages or other problems.

**Decentralized Electricity** - Rooftop solar arrays offer an example of another major change in the electric industry. It's called Distributed Energy Resources, or DER, which describes home generators, batteries and other energy sources. The challenge for utilities is to integrate those power sources, that could be variable and intermittent, into the smooth flow of electricity on the grid.

# CHANGING YOUNG LIVES

The Great Plains Youth Regional Treatment Center near Mobridge is a place where at-risk youth can go to address their challenges with drug and alcohol abuse. *Photo by Roger Lawien*

## Treatment center helps young people get back on the right path

**Billy Gibson**

billy.gibson@sdrea.coop

It was a small compliment, but it meant everything to the young lady who wasn't quite accustomed to receiving positive reinforcement. A simple affirmation spoken softly and sincerely into her ear: "You're gorgeous, and you're worthy." And the tears began to flow.

The Indian Health Service Great Plains Youth Regional Treatment Center near Mobridge is a place where at-risk youth can go to address their challenges with drug and alcohol abuse and find the support they need to deal with difficult situations.

Acting Clinical Director Charita Dowdell remembers that encounter with the young woman.

"I tell all of our residents how gorgeous they are and that I see the beauty in them and who they are deep down inside," Dowdell said. "I told her she was worthy and that she had value,

and she just broke down. She told me that nobody had ever said that to her."

That's just one of the stories about how the treatment center's staff strive to change the lives of teens who enter the program. There are many others.

Program Director Lavon Booth has been involved with the residential program for 20 years, initially as an administrative officer when she started in 2002. She previously served at the Cheyenne River Service Unit in her hometown of Eagle Butte before starting at the YRTC.

She sees the transformation of residents captured in plain view during graduation ceremonies that take place when the 12-week session concludes.

"We're very fortunate to see the change that happens in our residents from the time they arrive until the time they graduate," she said. "We see them moving in a positive direction and at graduation we get to hear them speak intimately about what they've learned and you see how it all comes together.

They come in very shy and reserved, and they leave here carrying a more positive spirit and more confidence. It's really touching for us and very rewarding."

The treatment center is housed in the old Chief Gall Inn hotel on land leased from the Standing Rock tribe. Youth between the ages of 13 and 17 are referred through tribal alcohol programs, local schools, community service organizations and other agencies.

According to the center's mission statement, the program "is dedicated to promoting a healthy lifestyle restoring balance and harmony in mind, body and spirit to our American Indian youth and their families."

Dowdell said playing a role in watching that mission statement come true to life in the form of changed behaviors and more positive attitudes makes her know she's definitely making a profound difference.

One effective modality is a mentoring program where residents taking part in the rehabilitation process shepherd those who are just entering the facility. Not only do the incumbent residents show the newbies around the physical

The youth treatment center is located in the former Chief Gall Inn hotel near Mobridge. *Photo by Roger Lawien*

space, but they also listen to their concerns, answer questions and try to allay their fears that stem from living in a new environment with certain rules, guidelines and expectations.

“When they start feeling homesick or afraid or stressed and they just need someone near their age to talk to, it helps them make the adjustment so they can settle down and focus on what they need to do to make changes. That bond is something that actually helps both of them get through and graduate successfully,” she said.

Dowdell noted there is a concern among staff about residents returning to a challenging environment. So, upon graduation, the youth receive support through a tracking system where staffers make regular check-in calls after three days, three months, six months and a year. A tele-health network is also

available to the graduates.

Role-playing also helps re-integration, Dowdell said. She added that the residents are taught to anticipate the same kind of challenges they faced before and how to handle them with a different approach.

“They return as a changed person, but everybody else around them will be doing the same things,” she said. “We tell them to stay connected to their support system and manage their emotions; how to be true to yourself while being respectful to others. We prepare them for what life is going to look like when they leave.”

She mentioned one particular youngster who entered the program with a defiant attitude and dealing with depression, anxiety and post-traumatic stress. She knuckled down academically and caught up to her class grade. After

graduation, she returned to juvenile detention for seven months. But in the end, she straightened out her life by applying the things she learned at the center.

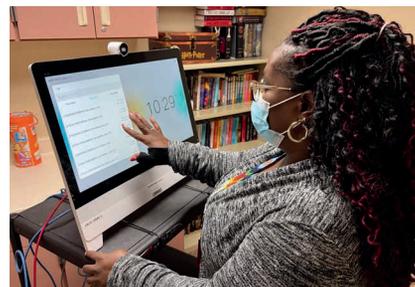

“She struggled with treatment, but she sent us a letter thanking us for what the program did for her,” Dowdell said. “She said she was grateful for giving her the skills to manage the difficult predicament she was going through. She changed her mentality and grew and matured and became a new person.”

Dowdell stressed that parents can play a key role in helping their children navigate through rehabilitation or prevent them from becoming a candidate in the first place.

“Listen to your children,” she emphasized. “They are saying something to you, but often they don’t feel like they’re being heard. Before you shut that door, listen to what they’re saying. You may have to shut the door anyway, but at least take the time to listen to what they have to say.”

## Botkin family creates Santa Sacs program to spread holiday cheer

**Billy Gibson**

billy.gibson@sdrea.coop

Each Christmas season, the Botkin family home nestled in the foothills just outside of Spearfish is transformed from a cozy chalet-style space into a tightly managed, finely tuned assembly center.

The goal is to produce dozens of cinch sacks full of Christmas gifts for school-age children. There's even a name for the operation: Santa Sacs for Kids.

Amanda Botkin and her husband, Eric, have spent the past 10 yuletide seasons organizing the program and working in conjunction with local school counselors to connect with students and distribute the gift bags. When the calendar page flips to December, the Botkins and their three children ages 8 through 14 kick into high gear and the home starts buzzing with activity.

To achieve maximum efficiency – or possibly to prevent the family pets from completely freaking out - the process is

departmentalized. In the kitchen area, bags are filled with coloring books and stickers and small toys for kindergarten and elementary school children. In the living room, items specifically for older female students are gathered up and placed in pink plastic sacks. Down the hallway, fast-food gift cards, winter hats and personal hygiene products like body wash and shampoo for high schoolers are collected and deposited in the totes.

Closer to Christmas and before school lets out for the break, the bags are loaded up in the family Sequoia and transported to counselors at different schools in the area.

The entire program was Amanda's brainchild, which stemmed from her quest for a way to spark a spirit of giving and community service within her own children – and most of all, a sense of gratitude for blessings received.

“My oldest daughter, Elizabeth, was in kindergarten and I just felt that it was very important for my kids to understand how fortunate we are as a

Eric's sister, Amy Irion, also enjoyed participating in the annual project.

family. They need to know what it's like to do things for others,” she said. “Not everybody has a Christmas that looks like ours does.”

Amanda, who works as a nurse in Spearfish, contacted local school counselor and personal friend Mandi Scott and shared the details of her plan. Scott climbed aboard without hesitation. Then Amanda hopped on social media to seek support from other friends, relatives and anyone else interested in contributing to the project. The response was overwhelming.

“We've received so much help from so many people who were willing to donate items or funds to buy gifts,” she said. “But we wouldn't be able to do

anything without participation from our counselors. We do everything through them and everything is anonymous with the kids. They give us the ages and genders and we put together the Santa Sacs for them based on the information we get. School counselors have a really hard job and don't always get the recognition they deserve, so we want them to know how much we appreciate what they do and the critical services they provide. They're amazing!"

While Amanda says that pursuing the project is its own reward, occasionally the counselors will forward messages of thanks they've received from students.

"It's nice to get notes when the kids send them," Amanda said. "But it's mostly about trying to give them the kinds of gifts that they'll like or use or have fun with."

Eric Botkin said he was gung-ho from the beginning when his wife approached him with her plans. He describes the influence his single mother had on developing his understanding of charity. When he was younger, his mom worked

Elizabeth was a youngster when her mother started Santa Sacs for Kids and helps each year to stuff and distribute gift bags.

at a nursing home in Douglas, WY, and he and his siblings would spend Christmas visiting with residents and giving them presents. When Eric was in high school, his mother was a patrolling police officer and used her position to serve others and help solve problems.

During the first year of Santa Sacs for Kids, Eric's role was to take care of the younger kids, Anna and Dean, while kindergartner Elizabeth played the role of Amanda's elf.

"I kept an eye on the kids while Elizabeth and Amanda went out and shopped," Eric said. "But then as the years went along, the number of bags and gifts kept growing. We needed

every hand in the house and whatever volunteers we could get. Amanda has a huge heart and is a great person and always tries to make sure there are nice things in the bags. She wants the kids to all love what they get."

Amanda, not exactly a loafer, has bigger dreams for the program she created: "I'd really like to get more of the surrounding communities involved and put more bags out there. There's so much need."

She would also like to see more older kids get involved in Christmas giving projects so that they can learn the lessons that Elizabeth has learned.

Elizabeth, a 14-year-old freshman at Spearfish High School, is a track and wrestling athlete and also participates in Spartans for Spartans, a group that helps elementary students make a smoother transition to middle school.

"I like getting Christmas presents, but it's more important to give to others," she said. "I like doing something positive with my family and it's great knowing I'm helping other kids make their lives better."
